

Extension Care

Get the most out of your lustrous locks! Be sure to properly care for your Extensions.

To maintain the integrity of human hair extensions, please follow these care instructions:

1. Do not shampoo for 48-72 hours after the extensions are completed, or after any maintenance sessions.
2. Do not scrub hair when shampooing or conditioning. Condition and detangle the hair from mid-strand to the ends. Avoid the scalp area.
3. Wrap hair with a towel to dry. Do not rub hair with the towel.
4. Use blow dryers on the lowest heat setting. The cool air setting is preferable. Do not use a forceful air setting when using the blow dryer.
5. Always use the manufacturer's recommended products and never use products that contain acetone, alcohol or sulphur.
6. Before going to bed, protect the hair by pulling it back into a ponytail or bun to prevent tangling during sleep.
7. Brush hair with a looped brush several times a day, starting at the nape and working upwards. Never use a wide-toothed comb or attempt to remove tangles from hair ends. Be sure not to use a comb in the area between scalp and the extension bonds.
8. Some manufacturers approve of using hot rollers and curling irons as long as the wearer avoids using them near the bonds. Check before using.
9. Swimming pool chemicals and seawater weaken keratin bonds. Before swimming, wet the hair completely in the shower, put the hair in a bun and cover with a bathing cap. After swimming, rinse hair immediately and dry the base area.

Other conditions and guidelines may be specified by the extensions manufacturer. We recommend that you follow these specifications in order to extend the life and prevent damage to your extensions.
